Allied Telesis*

x320 Series

Gigabit Layer 3 PoE++/PoE Pass-through Switches

The Allied Telesis x320 Series of Gigabit Layer 3 PoE++/PoE pass-through switches offer an impressive set of features in a compact design. Flexible Power over Ethernet capabilities make them ideal for IoT device connectivity in smart buildings and business environments.

Overview

Allied Telesis x320 Series are secure and reliable, offering 8 x Gigabit PoE enabled ports and 2 x SFP uplinks. Advanced power connectivity features provide flexibility and value to meet the needs of today's connected business. The x320-10GH can provide up to 90 Watts of PoE power on all ports, while the x320-11GPT can be powered by PoE¹, and also pass PoE power through to connected end points. Each switch offers 8 x 10M/100M/1 Gigabit ports and flexible Gigabit uplinks.

Flexible PoE

The x320 Series support today's commonly used PoE standards, providing 15.4 Watts of PoE (802.3af), and 30 Watts of PoE+ (802.3at). In addition, the x320-10GH also supports providing 60 or 90 Watts of PoE++ (802.3bt).

Continuous PoE

Continuous PoE allows the x320 Series switches to be restarted without affecting the supply of power to connected devices. Smart lighting, security cameras, and other PoE devices will continue to operate during a software upgrade on the switch.

Network Management

Vista Manager™ EX bundled with Allied Telesis Autonomous Management Framework™ Plus (AMF Plus)) meets the increasing management requirements of modern networks. While AMF Plus allows an entire network to be securely and easily managed as a single virtual device, Vista Manager EX provides an intuitive and powerful graphical tool for monitoring and managing AMF Plus wired, Autonomous Wave Control (AWC) wireless, and third party (SNMP) devices.

Cybersecurity

The x320 series acting as an AMF Plus member is compatible with our AMF-Security solution, which enables a self-defending network. The AMF-Sec controller responds immediately to any internal malware threats by instructing the x320 to isolate the affected part of the network, and quarantine the suspect device. Vista Manager EX alerts networks administrators of threats that have been dealt with.

Network resiliency

Allied Telesis Ethernet Protection Switched Ring (EPSRing™), and the standards-based G.8032 Ethernet Ring Protection, ensure that distributed network segments have high-speed, resilient access to online resources and applications.

Secure

A secure network environment is guaranteed. The x320 Series offers powerful control over network traffic types, secure management options, loop guard to protect against cabling mistakes, and tri-authentication for comprehensive access control.

Security from malicious network attacks is provided by a comprehensive range of features such as DHCP snooping, STP root guard, BPDU protection, and access control lists. Each of these can be configured to perform a variety of actions upon detection of a suspected attack or a malfunction.

Environmentally friendly

The x320 Series supports Energy Efficient Ethernet (EEE), automatically reducing the power consumed by the switch whenever there is no traffic on a port. This sophisticated feature can significantly reduce operating costs by reducing the power requirements of the switch and any associated cooling equipment.

The x320 models are fan-less, providing silent operation, which makes them ideal for desktop or work area deployment.

Key Features

- ► AlliedWare Plus Enterprise-class operating system
- ➤ Allied Telesis Autonomous Management FrameworkTM Plus (AMF Plus)
- ► Vista Manager EX compatible
- ► AMF-Security compatible
- ► Full 30 Watts of PoE+
- ► Up to 90 Watts of PoE++ (x320-10GH only)
- ▶ PoE pass-through (x320-11GPT only)
- ► Continuous PoE
- ► EPSRingTM and G.8032 for resilient rings
- ► EPSR Master
- ► Energy Efficient Ethernet saves power
- ▶ Active Fiber Monitoring
- ▶ Static and dynamic routing
- ► Fanless design for silent operation
- ▶ Flexible deployment
- ► Wide operating temperature range
- Multicast Source Discovery Protocol (MSDP)
- ► Link Monitoring
- ► Upstream Forwarding Only (UFO)
- ► NETCONF/RESTCONF with YANG data modelling
- ▶ IPFIX (IP Flow Information Export)

¹ The x320-11GPT uses PD port 11 to receive PoE power, but cannot be powered by PoE if the AC adapter is connected

Key Features

Allied Telesis Autonomous Management Framework™ Plus (AMF Plus)

- ► AMF Plus is a sophisticated suite of management tools that provide a simplified approach to network management. Common tasks are automated or made so simple that the every-day running of a network can be achieved without the need for highly-trained, and expensive, network engineers. Powerful features like centralized management, auto-backup, auto-upgrade, autoprovisioning and auto-recovery enable plug-andplay networking and zero-touch management.
- AMF Plus secure mode encrypts all AMF traffic, provides unit and user authorization, and monitors network access to greatly enhance network security.
- ► From AW+ 5.5.2-2 onwards, an AMF Plus license operating in the network provides all standard AMF network management and automation features, and also enables the AMF Plus intent-based networking features menu in Vista Manager EX (from version 3.10.1 onwards).

Power over Ethernet (PoE+, PoE++, and PoE pass-through)

- ➤ The x320-10GH supports providing up to 90 Watts (PoE++) on all ports. This enables powering high power devices such as high resolution PTZ cameras with heater/blowers for outdoor applications, enhanced infrared lighting and lighting controllers, remote Point of Sale (POS) kiosks, and more.
- ► The x320-11GPT can supply up to 30 Watts (PoE+) to connected devices. It can be powered by an AC power adapter, or by PoE. When deployed together, the x320-11GPT can be powered by the x320-10GH, while PoE passthrough enables power from the x320-10GH to pass through the x320-11GPT to power connected end points.

PWR300 (External Power Supply)

➤ This PWR300 is the external Power Supply Unit (PSU) for x320-10GH. One PWR300 will power the switch and provide PoE power. Up to three PWR300 PSUs can be used to increase the available PoE power, and enable power supply redundancy.

Flexible deployment

➤ The x320 Series can operate from -10 to +55 degrees Celsius, and with a fanless design, and using the PoE passthrough feature, are ideally suited for flexible deployment in the ceiling of smart buildings and any other areas of the business premises.

Continuous PoE

Continuous PoE allows the switch to be restarted without affecting the supply of power to connected devices. Smart lighting, security cameras, and other PoE devices will continue to operate during a software upgrade on the switch.

Ethernet Protection Switched Ring (EPSRing™)

 EPSRing allows several x320 switches to form a high-speed protected ring, capable of recovery within as little as 50ms. This feature is perfect for high performance and high availability in

- enterprise networks. x320 Series switches can act as the EPSR Master.
- Super-Loop Protection (SLP) enables a link between two EPSR nodes to be in separate EPSR domains, improving redundancy and network fault resiliency.

G.8032 Ethernet Ring Protection

- G.8032 provides standards-based high-speed ring protection, that can be deployed stand-alone, or interoperate with Allied Telesis EPSR.
- Ethernet Connectivity Fault Monitoring (CFM) proactively monitors links and VLANs, and provides alerts when a fault is detected.

NETCONF/RESTCONF

 NETCONF/RESTCONF with YANG data modeling provides a standardized way to represent data and securely configure devices.

Industry-leading Quality of Service (QoS)

➤ Comprehensive low-latency wire speed QoS provides flow-based traffic management with full classification, prioritization, traffic shaping and min/max bandwidth profiles. Boosted network performance and guaranteed delivery of business-critical Ethernet services and applications are provided. Time-critical services such as voice and video take precedence over non-essential services such as file downloads, maintaining responsiveness of Enterprise applications

Voice VLAN

Voice VLAN automatically separates voice and data traffic into two different VLANs. This places delay-sensitive traffic into a voice-dedicated VLAN, which simplifies QoS configurations.

Open Shortest Path First (OSPFv2, OSPFv3)

 OSPF is a scalable and adaptive routing protocol for IP networks. The addition of OSPFv3 provides support for IPv6 and further strength for next generation networking.

IPFIX (IP Flow Information Export)

▶ IPFIX enables exporting IP flow data in a network for analysis. This provides network administrators with information for accounting, billing, capacity planning, and performance optimization.

sFlow

sFlow monitors switched networks, and provides visibility to enable performance optimization, usage accounting/billing, and defense against security threats. Sampled packets sent to a collector provide a real-time view of network traffic.

Active Fiber Monitoring (AFM)

Active Fiber Monitoring prevents eavesdropping on fiber communications by monitoring received optical power. If an intrusion is detected, the link can be automatically shut down, or an operator alert can be sent. Active Fiber Monitoring is supported on fiber data and fiber stacking links.

Tri-authentication

Authentication options on the x320 Series also include alternatives to IEEE 802.1x port-based authentication, such as web authentication to enable guest access and MAC authentication for endpoints that do not have an IEEE 802.1x supplicant. All three authentication methods— IEEE 802.1x, MAC-based and Web-based can be enabled simultaneously on the same port for tri-authentication.

TACACS+ Command Authorization

➤ TACACS+ Command Authorization offers centralized control over which commands may be issued by each specific AlliedWare Plus device user. It complements authentication and accounting services for a complete AAA solution.

Premium Software License

The x320 Series feature set can be elevated by applying the premium software license, which adds dynamic routing protocols and Layer 3 multicasting capabilities.

VLAN Access Control List (ACLs)

ACLs simplify access and traffic control across entire segments of the network. They can be applied to a VLAN as well as a specific port.

Loop Protection

- ➤ Thrash limiting, also known as rapid MAC movement, detects and resolves network loops. It is highly user-configurable—from the rate of looping traffic to the type of action the switch should take when it detects a loop.
- ▶ With thrash limiting, the switch only detects a loop when a storm has occurred, which can potentially cause disruption to the network. To avoid this, loop detection works in conjunction with thrash limiting to send special Loop Detection Frame (LDF) packets that the switch listens for. If a port receives an LDF packet, you can choose to disable the port, disable the link, or send an SNMP trap. This feature can help to detect loops before a network storm occurs, avoiding the risk and inconvenience of traffic disruption.

Multicast Source Discovery Protocol (MSDP)

MSDP enables two or more PIM-SM (Sparse Mode) domains to share information on active multicast sources, for more efficient forwarding of multicast traffic.

Link Monitoring (Linkmon)

Linkmon enables network health monitoring by regularly sending probes over key links to gather metrics comprising latency, jitter, and probe loss. This supports pro-active network management, and can also be used with triggers to automate a change to device or network configuration in response to the declining health of a monitored link.

VLAN Mirroring (RSPAN)

VLAN mirroring allows traffic from a port on a remote switch to be analyzed locally. Traffic being transmitted or received on the port is duplicated and sent across the network on a special VLAN.

Upstream Forwarding Only (UFO)

UFO lets you manage which ports in a VLAN can communicate with each other, and which only have upstream access to services, for secure multi-user deployment.

Lighting Controller Surveillance VCSTACK Network Attached Storage Server Rack

Enable today's smart buildings with flexible PoE

PoE++

PoE pass-through

More than ever, PoE powered devices are converging on the Enterprise network to enable smooth business operation, with central management of building security and systems, as well as online user connectivity. The x320 Series are ideal for these modern business networks, with flexible PoE provision to connect and power a wide range of network and IoT devices.

The x320-10GH provides up to 90 Watts of PoE power per port, and as shown in the diagram can support high-power devices such as high resolution outdoor PTZ cameras with heater/blowers, advanced LED lighting controllers and more.

The x320-11GPT can supply up to 30 Watts of PoE power to connected devices, and can itself be powered by PoE or an AC adapter.

As shown in the diagram, the x320-10GH can use PoE to power the x320-11GPT, and also pass PoE power though it to connected devices such as IP phones, wireless access points and so on.

Internet

With their fanless design for silent operation, and supporting a wide temperature range, the x320 series offer very flexible deployment options. They can be DIN rail mounted in ceiling and other building spaces, and when powered by PoE the x320-11GPT doesn't require a separate power connection to operate. Used alongside PoE pass-through to connect and power end points, the x320 Series are an ideal solution for today's smart buildings and converged business networks.

Specifications

PRODUCT	10/100/1000T (RJ-45) POE ENABLED PORTS	10/100/1000T (RJ-45) POE-IN PORT	1000X SFP PORTS	SWITCHING FABRIC	FORWARDING RATE
x320-10GH	8	-	2	24Gbps	14.9Mpps
x320-11GPT	8	1	2	24Gbps	16.4Mpps

Performance

- Supports 10KB L2 jumbo frames
- Wire speed multicasting
- ▶ 4094 configurable VLANs
- ▶ Up to 16K MAC addresses
- ▶ Up to 2K multicast entries
- ► 512MB DDR3 SDRAM, 128MB NAND flash memory
- ► Packet buffer memory: 1.5MB

Reliability

- ▶ Modular AlliedWare Plus operating system
- ► Full environmental monitoring of PSU, fans, temperature and internal voltages. SNMP traps alert network managers in case of any failure

Expandability

► Versatile licensing options for additional features

Flexibility and Compatibility

- ▶ 1G-SFP ports on x320 will support any combination of Allied Telesis 100Mbps and 1000Mbps SFP modules listed in this document under Ordering Information
- ► Port speed and duplex configuration can be set manually or by auto-negotiation

Diagnostic Tools

- ► Active Fiber Monitoring detects tampering on optical links
- ▶ Built-In Self Test (BIST)
- ► Cable fault locator (TDR)
- ► Connectivity Fault Management (CFM) Continuity Check Protocol (CCP) for use with G.8032 ERPS
- ▶ Find-me device locator
- ► Automatic link flap detection and port shutdown
- ► Optical Digital Diagnostic Monitoring (DDM)
- ▶ Ping polling for IPv4 and IPv6
- ▶ Port mirroring
- ► Trace Route for IPv4 and IPv6
- ► Uni-Directional Link Detection (UDLD)
- ▶ Port mirroring
 - » No limit on mirrored ports
 - » 1 mirror (analyzer) port
- ► VLAN mirroring (RSPAN)

IPv4 Features

- Black hole routing
- Directed broadcast forwarding
- ▶ DNS relay
- ► Equal Cost Multi Path (ECMP) routing
- Policy-based routing
- ► Route maps and redistribution (OSPF and RIP)
- Static unicast and multicast routing for IPv4
- ► UDP broadcast helper (IP helper)

IPv6 Features

- ▶ DHCPv6 client and relay
- ► DNSv6 client and relay

- ► IPv4 and IPv6 dual stack
- ▶ IPv6 aware storm protection and QoS
- IPv6 hardware ACLs
- ▶ Device management over IPv6 networks with SNMPv6, Telnetv6 and SSHv6
- NTPv6 client and server
- ▶ Static unicast and multicast routing for IPv6
- ▶ Log to IPv6 hosts with Syslog v6
- ► IPv6 Ready certified

Management

- Allied Telesis Autonomous Management Framework Plus (AMF Plus) enables powerful centralized management and zero-touch device installation and recovery
- Console management port on the front panel for ease of access
- ► NETCONF/RESTCONF northbound interface with YANG data modelling
- ► Eco-friendly mode allows ports and LEDs to be disabled to save power
- ► Web-based Graphical User Interface (GUI)
- ► Industry-standard CLI with context-sensitive help
- ► Powerful CLI scripting engine
- Comprehensive SNMP MIB support for standardsbased device management
- ▶ Built-in text editor
- ► Event-based triggers allow user-defined scripts to be executed upon selected system events
- USB interface allows software release files, configurations and other files to be stored for backup and distribution to other devices
- ► Management stacking allows up to 24 devices to be managed from a single console

Quality of Service

- 8 priority queues with a hierarchy of high priority queues for real time traffic, and mixed scheduling, for each switch port
- Limit bandwidth per port or per traffic class down to 64kbps
- Wire speed traffic classification with low latency essential for VoIP and real-time streaming media applications
- ▶ IPv6 QoS support
- Policy-based QoS based on VLAN, port, MAC and general packet classifiers
- ► Policy-based storm protection
- ► Extensive remarking capabilities
- Queue scheduling options for Strict priority, weighted round robin or mixed scheduling
- ► Type of Services (ToS) IP precedence and DiffServ marking based on layer 2, 3 and 4 headers

Resiliency Features

- Control Plane Prioritization (CPP) ensures the CPU always has sufficient bandwidth to process network control traffic
- Dynamic link failover (host attach)
- EPSRing (Ethernet Protection Switched Rings) with Super-Loop Protection (SLP) and enhanced recovery for extra resiliency

- ▶ Loop protection: loop detection and thrash limiting
- ▶ PVST+ compatibility mode
- ▶ STP root guard

Security Features

- Access Control Lists (ACLs) based on layer 3 and 4 headers
- ► Configurable auth-fail and guest VLANs
- ► Dynamic ACLs assigned via port authentication
- ► ACL Groups enable multiple hosts/ports to be included in a single ACL, reducing configuration
- ► Configurable ACLs for management traffic
- ► Authentication, Authorization and Accounting
- Bootloader can be password protected for device security
- ▶ BPDU protection
- ► DHCP snooping, IP source guard and Dynamic ARP Inspection (DAI)
- ▶ Dynamic VLAN assignment
- ► DoS attack blocking and virus throttling
- MAC address filtering and MAC address lockdown
- Network Access and Control (NAC) features manage endpoint security
- ► Learn limits (intrusion detection) for single ports or LAGs
- ► Private VLANs provide security and port isolation for multiple customers using the same VLAN
- ► RADIUS group selection per VLAN or port
- ► Secure Copy (SCP)
- Secure File Transfer (SFTP) client
- ► Strong password security and encryption
- ► Tri-authentication: MAC-based, web-based and IFFF 802 1x
- Web-based authentication

Environmental Specifications

- ► Operating temperature range: -10°C to 55°C (14°F to 131°F)
- Storage temperature range: -25°C to 70°C (-13°F to 158°F)
- Operating relative humidity range: 5% to 90% non-condensing
- Storage relative humidity range: 5% to 95% non-condensing
- Operating altitude: 3,000 meters maximum (9,843 ft)

Electrical Approvals and Compliances

- ► EMC: EN55032 class A, FCC class A, VCCI class A, ICES-003 class A
- ► Immunity: EN55024, EN61000-3-levels 2 (Harmonics), and 3 (Flicker) AC models only

Safety

- Standards: UL60950-1, CAN/CSA-C22.2 No. 60950-1-03, EN60950-1, EN60825-1, AS/NZS 60950.1
- Certification: UL. cUL

6 | x320 Series AlliedTelesis.com

x320 Series | Gigabit Layer 3 PoE++/PoE Pass-through Switches

Feature Licenses

NAME	DESCRIPTION	INCLUDES
AT-FL-x320-01	x320 premium license	 OSPF (256 routes) PIMv4-SM, DM, and SSM RIPng (256 routes) OSPFv3 (256 routes) PIMv6-SM and SSM MLD v1/v2 VLAN double tagging (Q-in-Q)
AT-FL-x320-8032	ITU-T G.8032 license	► G.8032 ring protection ► Ethernet CFM
AT-FL-x320-CP0E	Continuous PoE license	► Continuous PoE power

Ordering Information

Switches

19 inch rack-mount brackets included

AT-x320-10GH

8-port 10/100/1000T PoE++ switch with 2 SFP ports, and 3 external PSU ports²

AT-x320-11GPT

8-port 10/100/1000T PoE+ switch with 2 SFP ports, one AC adapter port³, and one PoE-in port⁴ (supporting PD and PoE pass-through)

Power Supplies

AT-PWR300-xx

300W PoE power supply (for x320-10GH and GS980EM/10H switches)

Where xx = 10 for US power cord

20 for no power cord

30 for UK power cord 40 for Australian power cord

50 for European power cord

SFP Modules

AT-SPTX/I

10/100/1000T SFP, RJ-45 (100 m), industrial temperature

AT-SPSX/I

1000SX GbE multi-mode 850 nm fiber up to 550 m industrial temperature

AT-SPLXI0/I

1000LX GbE single-mode 1310 nm fiber up to 10 km industrial temperature

AT-SPBD20-13/I

1000BX GbE Bi-Di (1310 nm Tx, 1490 nm Rx) fiber up to 20 km $\,$

AT-SPBD20-14/I

1000BX GbE Bi-Di (1490 nm Tx, 1310 nm Rx) fiber up to 20 km

AT-SPBD40-13/I

1000LX GbE single-mode Bi-Di (1310 nm Tx, 1490 nm Rx) fiber up to 40 km, industrial temperature

AT-SPBD40-14/I

1000LX GbE single-mode Bi-Di (1490 nm Tx, 1310 nm Rx) fiber up to 40 km, industrial temperature

² PWR300 power supplies for the x320-10GH must be ordered separately

³ The x320-11GPT ships with an AC power adapter

 $^{^{\}rm 4}$ The x320-11GPT can be powered by PoE from 30W (class 4) to 90W (class 8)
